## 2023학년도 이화여자대학교 편입학전형

## 영어 필답고사 문제지 (유형 1)

| 전공(학과) | 수험번호 |  | 성 명 |
| :--- | :--- | :--- | :--- |

- 유 의 사 항

1. 시험시간은 100 분임.
2. 감독관의 지시가 있을 때까지 문항을 보지 알 것.
3. 시험 종료후 문제지를 가져가지 말 것.
4. 연습은 문제지 여백을 이용할 것.
5. 답안지의 '답안지 작성시 유의사항'을 반드시 확인할 것.
$\square$
6. 답안지에 수험번호와 문제지 유형을 표시하고, 답은 해당 문항별로 답란에 검은색 펜으로 표시할 것.

이 화 여 자 대 학 교
[1-5] Choose the synonym of the underlined word.

1. Plants are immobile, but mechanisms have evolved by natural selection that enable them to adjust to a wide range of environmental circumstances by developmental or physiological means.
(1) matters
(2) meanings
(3) measures
(4) minors
(5) monitors
2. Adapting these initiatives to support international efforts to restore whale populations could lead to a breakthrough in the fight against climate change.
(1) step into
(2) leap over
(3) step through
(4) step rearward
(5) leap forward
3. Wars in distant lands often have surprising and far-reaching effects.
(1) deep-thinking
(2) wide-ranging
(3) long-serving
(4) broad-minded
(5) heavy-lidded
4. Markets took a tumble yesterday as investors were spooked by looming threats of strict export controls on key technologies.
(1) impending
(2) intending
(3) upending
(4) unending
(5) relenting
5. With nary a serviceable machine to be found, the engineer set to work cobbling together a makeshift unit out of a hodgepodge of functional components she scrounged from the inoperable devices.
(1) jangle
(2) hobble
(3) jumble
(4) bobble
(5) jingle
[6-10] Choose the antonym of the underlined word.
6. Climate change now impacts each and every single country on each continent, affecting the lives of individuals and communities as well as disrupting national economies.
(1) marginalizing
(2) simulating
(3) enlivening
(4) enervating
(5) insinuating
7. The failure to mitigate and adapt to climate change is among the biggest global risks for our planet, with significant environmental, economic and health impacts.
(1) exacerbate
(2) exasperate
(3) expiate
(4) exfoliate
(5) exonerate
8. For some people being faced with a difficult situation, prevarication is a go-to response.
(1) forbearance
(2) forewarning
(3) forgoing
(4) forthrightness
(5) foresight
9. The clamor over the group's second album has precipitated an insatiable fervor for their media, particularly their early recordings, which have been regularly lauded by critics.
(1) purloined (2) padded (3) penned (4) pawned (5) panned
10. Strong empirical studies that investigate the questions are important in informing the current theoretical debate between serial versus parallel word identification during natural sentence reading.
(1) conjectural
(2) convivial
(3) conspiratorial
(4) consanguine
(5) conjunctive
11. Choose the most logical order for the following sentences.
[A] The arrival of food triggers the secretion of substances that promote the next stage of chemical digestion, as well as muscular contractions that propel food farther along the canal. [B] Many animals have long intervals between meals and do not need their digestive systems to be active continuously. [C] For example, you learned earlier that nervous reflexes stimulate the release of saliva when food enters the oral cavity and orchestrate swallowing when a bolus of food reaches the pharynx. [D] Similarly, the arrival of food in the stomach triggers churning and the release of gastric juices. [E] Instead, each step in processing is activated as food reaches a new compartment in the alimentary canal.
(1) $[\mathrm{A}]-[\mathrm{C}]-[\mathrm{E}]-[\mathrm{D}]-[\mathrm{B}]$
(2) $[\mathrm{A}]-[\mathrm{E}]-[\mathrm{D}]-[\mathrm{B}]-[\mathrm{C}]$
(3) $[\mathrm{B}]-[\mathrm{E}]-[\mathrm{A}]-[\mathrm{C}]-[\mathrm{D}]$
(4) $[B]-[C]-[E]-[A]-[D]$
(5) $[C]-[B]-[A]-[D]-[E]$
[12-21] Fill in the blanks with the best-fitting option.
12. Global climate patterns are largely determined by the input of solar energy and Earth's $\qquad$ around the sun.
(1) substitution
(2) revolution
(3) convolution
(4) institution
(5) intuition
13. Diversity is a $\qquad$ of life. To date, biologists have identified and named about 1.8 million species of organisms, and estimates of the number of living species $\qquad$ about
10 million to over 100 million.
(1) symbol - last from
(2) meaning - span from
(3) hallmark - range from
(4) trademark - evolve from
(5) benchmark - run to
14. With nowhere else to turn, the globally acknowledged
$\qquad$ on ghosts was sought out to examine the of the levitating furniture.
(1) expert - ministry
(2) aspirant - mistake
(3) miscreant - conundrum
(4) authority - enigma
(5) maven - majesty
15. The atoms that make up the $\qquad$ molecules in all living things were at one time part of $\qquad$ substances in the soil, air, and water.
(1) obsolete - inert
(2) subversive - lifeless
(3) rampant - meaningless
(4) organic - inorganic
(5) animate - immaterial
16. As can be seen from satellite photographs or the window of an airplane, humans have $\qquad$ altered the environment.
By making large changes to the environment, we have $\qquad$ the selective pressures faced by many species. This suggests that we are likely causing evolutionary change.
(1) dramatically - transformed
(2) tragically - reiterated
(3) drastically - abrogated
(4) critically - ameliorated
(5) succinctly - manipulated
17. Calculus is $\qquad$ different from the mathematics that you have studied previously. Calculus is less static and more
$\qquad$ . It is concerned with change and motion.
(1) incrementally - variable
(2) implicitly - predictable
(3) utterly - stationary
(4) unremarkably - mutable
(5) fundamentally - dynamic
18. Breakthroughs in medical techniques are often owing not solely to $\qquad$ technologies but to the rediscovery and creative adaptation of previously $\qquad$ practices.
(1) sharpened - invalidated
(2) innovative - unknown
(3) indissoluble - discredited
(4) cutting-edge - debunked
(5) complicated - exploded
19. Property rights in information $\qquad$ from the necessary disadvantage that a piece of information, in order to contribute to the general information of the community, must say something substantially different from the community's previous common
$\qquad$ of information.
(1) suffer - stock
(2) languish - reservation
(3) differentiate - repository
(4) originate - interpretation
(5) deviate - reserve
20. Population density - the number of individuals per unit area or volume - reflects the $\qquad$ of births, deaths, immigration, and emigration. These environmental and social factors influence the $\qquad$ of individuals.
(1) interaction - perception
(2) interplay - dispersion
(3) interference - distribution
(4) intermingling - disposition
(5) interoperability - persuasion
21. Speed painting requires a lot of patience, as the $\qquad$ can be anywhere from 2 to 10 hours. The artists believe the first 30 minutes of the painting are the most important. This is where the painting $\qquad$ takes its shape: the creation of the foundation of the painting. Detailing comes later.
(1) interval - indistinguishably
(2) duration - initially
(3) period - consummately
(4) destination - originally
(5) inaction - primarily
[22-25] Choose the faulty expression among the five choices.
22. The tender barley seedlings, their stored seed reserves
(1) nearing exhaustion, have reached a (2) critical point in their lives. If they fail to attain (3) sufficient light, they will not be able to outcompete their neighbors in the race for resources, and they will perish. It is not surprising, therefore, that mechanisms (4) have evolved in plants that enable them to adjust their growth and development (5) accordingly to the spectral composition of the light available.
23. In the 1940 s, researchers (1) have learned that flowering is actually controlled by night length, not day length. Many of these scientists (2) worked with cocklebur, a short-day plant that
(3) flowers only when days are 16 hours or shorter (and nights are at least 8 hours long). These researchers found that if the light portion is broken by a brief exposure to darkness, flowering (4) proceeds. However, if the dark part is interrupted by even a few minutes of dim light, cocklebur will not flower, and this (5) turned out to be true for other short-day plants as well.
24. Generating emotion often requires interactions (1) between different regions of the brain. For example, laughing and crying both involve the limbic system interacting (2) with sensory areas of the forebrain. Similarly, structures (3) in the forebrain attach emotional "feelings" (4) into survival-related functions controlled (5) by the brainstem, including aggression, feeding and sexuality.
25. The global pandemic has given city planners (1) plenty to think about and an opportunity for change like no other. Now, as the world emerges unequally from the pandemic, many see a chance to fix the clunky, inefficient urban organisms we love to hate. But, (2) rest assuredly, the city of the future won't suddenly land as a sterile hellscape of flying cars (3) as far as the eye can see. In fact, it's being built, (4) for better or worse, (5) before our very eyes. You've just got to know where to look to see it evolving.
[26-28] Answer the questions after reading the passage below.
It was never my mission to exalt vegetables. I was a nose-to-tail carnivore until a high-cholesterol diagnosis led me to [A] $\qquad$ a plant-dominant diet. And I certainly couldn't have imagined that a decade later I'd be one of the nation's principal journalists covering the new wave of plant-based proteins.
Impossible. Incredible. Awesome. Sensational. Beyond. Meat alternatives branded with these and other superlatives now constitute a multi-billion-dollar market that could be nearly 20 times larger by 2030. And yet, my singular question about each new product is always the same: Well, what does it taste like? Does it... taste like meat?
Quite often it does. These new foods are engineered to mimic meat, designed to match its distinct chewiness, bloodiness, and umami flavor. Nowhere is this achievement clearer than at Beyond Meat's laboratory in Los Angeles. There, the company puts beef and chicken samples under a microscope to understand how their proteins and fats are woven together. Then it uses all the modern [B] $\qquad$ of industrial production, including heating, cooling, and the same extrusion process used to make Cheetos, to alchemize animal doppelgangers out of pea protein, coconut oil, and other nonmeat ingredients.
26. Which expression best completes [A]?
(1) reject (2) compel (3) embrace (4) adapt (5) replace
27. Which statement is BEST inferred from the passage?
(1) Meat alternatives are designed by combining different meats together.
(2) Examining meats helps companies create meat alternatives.
(3) Chicken and beef proteins are included in meat alternatives.
(4) A high-cholesterol diet includes meat alternatives.
(5) There will be 20 times as many kinds of meat alternatives by 2030.
28. Which expression best completes [B]?
(1) minerals
(2) materials
(3) manuals
(4) marvels
(5) morals
[29-31] Answer the questions after reading the passage below.
Breakthroughs in pain research are coming along swiftly. We now have a better understanding of how pain is processed throughout the body and brain and how to measure it. We have also discovered important differences between three types of pain.

The first is nociceptive pain, which responds to an injury or inflammation. The second is neuropathic pain, caused by damage to sensory nerves. Both are created by the brain as a defense mechanism against further injury. The brain [A] $\qquad$ signals from the damaged part of the body and transmits instructions back to the site of the damage that generate an appropriate level of pain.

These first two types have been studied extensively. However, the third type has only begun to be understood. This type, nociplastic pain, is when the brain's defensive system goes wrong, a state known as central sensitization. The brain's pain center becomes hypervigilant and responds [B] $\qquad$ to minor injuries or inflammation, converting them into excruciating pain. In some cases, there is no nociceptive pain at all, but the brain still sends out extreme pain signals. Negative mental states, such as anxiety or tiredness, can also be converted into pain. In certain cases, the pain leads to anxiety, which leads to more pain, in a vicious cycle of torment.
29. What cannot be inferred from the passage?
(1) Neuropathic pain is brought about by damage to sensory nerves.
(2) Nociplastic pain can be triggered in the absence of nociceptive pain.
(3) Neuropathic and nociplastic pain both defend against injury.
(4) Neuropathic pain is better understood than nociplastic pain.
(5) Nociplastic pain results from an overreaction in the brain's defensive system.
30. Which expression best completes [A]?
(1) obsesses
(2) abscesses
(3) excesses
(4) assesses
(5) accessories
31. Which expression best completes [B]?
(1) disparagingly
(2) discriminately
(3) incredulously
(4) unwillingly
(5) disproportionately
[32-34] Answer the questions after reading the passage below.
Since Richard Nixon launched the "war on drugs" half a century ago, the flow of cocaine into the United States has surged. Global production hit a record of 1,982 tonnes in 2020, according to the latest data, though that is likely to be an underestimate. That record high is despite decades of strenuous and costly efforts to [A] $\qquad$ the supply. Between 2000 and 2020 the United States ploughed ten billion dollars into Colombia to suppress production, paying the local armed forces to spray coca plantations with herbicide from the air or to yank up bushes by hand. To no avail: when coca is eradicated on one hillside, it shifts to another.
The worst harm falls on producing and trafficking countries, where drug profits [B] $\qquad$ violence. Murder in Colombia is three times more common than in the United States; in Mexico, four times. In some areas, drug gangs are so wealthy and well-armed that they rival the state, giving cops and officials the choice of silver or lead: be corrupted or be killed. Prohibition also sucks children out of school, as drug gangs favor recruits who are too young to be prosecuted.
32. Which statement is not appropriate according to the passage?
(1) Violence and murder plague countries that produce and traffic cocaine.
(2) Powerful gangs threaten to kill officials and police if they will not assist them.
(3) The war on drugs has been a costly yet efficacious endeavor.
(4) School-age children are often recruited into drug gangs.
(5) Actual cocaine production is believed to be higher than estimated.
33. Which expression best completes [A]?
(1) cut in
(2) cut over
(3) cut along
(4) cut up
(5) cut off
34. Which expression best completes [B]?
(1) fuel
(2) find
(3) flood
(4) frame
(5) forego
[35-36] Answer the questions after reading the passage below.
Humans have long had an unrealistic relationship with nature, having developed our outlook through the filter of zoos, safari parks and idealized TV shows. Artist Jim Naughten seeks to disrupt that cozy viewpoint with a series of works that unsettle as much as they inform, in the hope that they can jar us out of complacency.

From an enormous bear standing in a valley to river birds roosting by the water and gibbons swinging through the trees, British visual artist Jim Naughten's latest solo exhibition appears to depict idyllic naturescapes. Look closer, however, and you'll notice that not everything is quite as it seems: the leaves in these images are an unusual shade of blue, the grass unnaturally pink. The effect is a strange sense of dislocation; a vague disquiet about a dreamlike world that somehow manages to be both familiar and uncanny.
This is precisely the objective of Eremozoic, which seeks to [A] $\qquad$ the precarious state of the natural world, and humanity's growing disconnect from the environment, by depicting it as a fantastical Shangri-La of sorts.
35. Which statement is true according to the passage?
(1) The brightly colored grass and leaves show us the natural beauty of nature.
(2) The exhibition wants to reassure us about the state of the natural world.
(3) The exhibition is meant to wake us from our state of indifference.
(4) Zoos, safari parks, and TV shows promote a realistic view of nature.
(5) Naughten's exhibition is intended to show humanity's close bond with nature.
36. Which expression best completes [A]?
(1) overstate
(2) understate
(3) overwhelm
(4) underscore
(5) overtake
[37-38] Answer the questions after reading the passage below.

[^0]high status of visitors, something that still occurs in Philippine households today."
"People welcome their relatives, friends and, sometimes, even strangers into their homes to [B] $\qquad$ the food they prepare during the many festival celebrations that occur throughout the Philippines. Food, therefore, becomes a means to build social relations within the communities," Consul General Patron adds.

Even the way food is eaten is linked to social relations. "Pre-Hispanic Filipinos were recorded to eat with their hands, something which is still done even today and is considered a communal experience."
37. Which expression best completes [A]?
(1) bring us from it
(2) walk us through it
(3) run us to it
(4) have us do it
(5) take us to it
38. Which expression best completes [B]?
(1) consist of
(2) drop in
(3) remark on
(4) partake in
(5) give in
[39-40] Answer the questions after reading the passage below.
Aspects of language are always changing as it is the nature of languages to reflect the needs and contexts of speakers. However, of all the parts of speech, perhaps none reflects changes more than adjectives. Because the category adjective is an open, lexical word class, we add new members to this class on a regular basis.
One way we form new adjectives is by attaching different derivational affixes to root words. For example, the affixes -ful or -less can be added to root words to make new adjectives.
We also use word formation rules to create adjectives. Orwellian and Kafkaesque are twentieth-century examples of eponymous adjectives, adjectives derived from proper names, that also use adjectival affixes: -(i)an, -esque. Other longer-standing examples include Elizabethan, Byronic, and Aristotelian.
We also coin adjectives such as gnarly, rad, or dope, which demonstrate the same idea - something excellent - coined in a succession of recent decades. For instance, That's a gnarly shirt. Your car is rad. Check out this dope remix.
The meanings of existing adjectives also change over time, and sometimes even mean different things in different varieties of English. In many current varieties of English, sweet and tight mean "good." For example, I got a sweet deal. That concert was tight.
39. Which statement is not true according to the passage?
(1) Existing adjectives' meanings can change.
(2) Eponymous adjectives are derived from people's names.
(3) There is only one variety of English.
(4) Language aspects are always changing.
(5) We can create new adjectives.
40. Which does not indicate a way adjectives are formed mentioned in the passage?
(1) word formation rules
(2) adding prefixes
(3) meanings changing over time
(4) coining adjectives
(5) adding affixes
[41-50] Select the most appropriate word from the box below. Each word should be used only once.

| (1) onset | (2) outnumber | (3) from back | (4) emulated |
| :--- | :--- | :--- | :--- | :--- |
| (5) amassed | (6) upshot | (7) exasperated | (8) from stem |
| (9) for effect | (10) from scratch | (11) deficits | (12) defaults |
| (13) slipshod | (14) generous | (15) outperform | (16) upstart |
| (17) incarcerated (18) discerning | (19) excluding | (20) emanated |  |

41. Our intestines are home to an estimated 500-1,000 species of bacteria; their cells $\qquad$ all human cells in the body by a factor of ten.
42. The research findings imply that treatment of semantic but not phonological working memory $\qquad$ should lead to improved sentence comprehension and production, and preliminary findings support that view.
43. Far from personifying expediency, the bumbling investigator's methods appeared to the onlookers to be utterly $\qquad$ despite his sterling reputation.
44. The frustrated novelist was tormented by considerations over whether or not to start $\qquad$ -.
45. The lobby of the shipbuilding enterprise's corporate headquarters was bedecked $\qquad$ to stern with fanciful renditions of all manner of naval conveyances.
46. The would-be explorers were oppressed by the sudden burst of blistering heat and miasmic steam that $\qquad$ from the bowels of the vent.
47. The lucrative board position at the up-and-coming start-up company attracted a slew of heavy-hitters from big-name establishment firms, but the post would ultimately be handed to a(n) $\qquad$ who had flunked out of his first year at MIT.
48. The abysmal service at the restaurant caused one patron to vent his ire on the nearest server.
49. The coterie was comprised mainly of aesthetes whose ostensibly highbrow pronouncements oozed gravitas but were to the $\qquad$ ear wholly devoid of substance.
50. Despite the compelling rationales, considerable evidence
$\qquad$ from studies of healthy and brain-damaged individuals supports arguments against a critical role for working memory in language processing.

[^0]:    "Have you eaten?" is the common greeting used in the Philippines, which should tell you right away that food plays an important role in Filipino society. Their cuisine is as vast and varied as the more than 100 ethnolinguistic groups found on the 7,641 islands that make up the Philippines, and reflects the culture, geography, and history of the country. To get a better sense of the breadth of Filipino cuisine, we met with Philippine Consul General, Zaldy B. Patron, and asked him to [A] $\qquad$ -
    "Early Filipino society recognized food as an important component of their societies and used it to mark significant occasions," he explains. "European explorers recounted the generous meals prepared for them, and how they signified the
